1. The **Abstract Class** declares methods that act as steps of an algorithm, as well as the actual template method which calls these methods in a specific order. The steps may either be declared `abstract` or have some default implementation.
2. **Concrete Classes** can override all of the steps, but not the template method itself.

## # Pseudocode

In this example, the **Template Method** pattern provides a “skeleton” for various branches of artificial intelligence in a simple strategy video game.
